From Java to AI: Modernizing Enterprise Systems with Machine Learning

Java has been the backbone of enterprise software for decades — but in today's world, AI and Machine Learning are redefining what enterprise systems can do. The question is: how do you bridge the two?

In this session, Surya Rao Rayarao — Lead Software Engineer at SS&C Technologies, IEEE Senior Member, and MS Data Science graduate (UT Austin) — draws on 20+ years of Java and enterprise engineering experience to show you exactly how to evolve modern Java applications with AI/ML capabilities, without a full rewrite.

Key takeaways:

- The evolution of Java enterprise systems: from J2EE to AI-ready architectures
- Practical patterns for embedding ML pipelines into Spring Boot and Java microservices
- Real-world FinTech examples: using AI to solve complex financial data challenges in Java-based systems
- How to expose ML models as REST APIs and integrate them with existing Java backends
- Career insights for Java engineers looking to evolve into AI/ML-integrated roles

Whether you're a Java developer curious about AI, a tech lead navigating modernization, or an architect designing next-gen systems, this talk delivers actionable strategies grounded in 20+ years of real production Java experience.

ROOM 4 Fri 9:00 am - 9:55 am**KCJUG** Full session (50 minutes + 5 minute Q&A)
